

## Igloo Green Bean - 57 days

A cool weather hardy green bean. It has concentrated sets of long slender beans with excellent eating quality. It can be planted a week or two earlier than most beans, soon after last frost. Can also be sown in late July or earliest August in milder areas for a late crop.

**SOWING:** Plant outdoors in May through June after weather has warmed and all danger of frost has passed. Sow seeds 2 to 3 inches apart covering seeds with 1 to 1 1/2 inches of fine soil. Firm soil over seed.

**SPACING:** Leave approximately 2 feet between rows or plant in wide rows sowing seeds 4 to 6 inches apart in all directions.

**THINNING:** When plants are 3 or 4 inches high, thin to 4 to 6 inches apart.

**GERMINATION:** 1 to 2 weeks depending upon soil and weather conditions. Keep soil moderately moist during germination.
